

## Design Management

PDM Integrator extends the Model Manager solution into a multi-CAD heterogeneous environment. In addition to the CoCreate design suite applications, PDM Integrator supports,

- Solidworks®
- SolidEdge®
- Creo Parametric®
- autodesk Inventor®
- autodesk AutoCAD®

This solution provides design teams the ability to create, change, up issue and stores their design data in a managed and controlled environment.

## Engineering Change Management

Designed to optimise engineering change life cycles and permissions by applying access control list business rules for,

- Release States
- Up Issuing / New Revisions
- User / Group privileges
- Access Control Lists

## Increased Productivity

Projects with large amounts of design data are managed by a powerful set of features to greatly increase workgroup productivity, and provide mechanisms to aid ISO9000 control and traceability.

Model Manager saves valuable time by answering such questions as:

- Where is this part or assembly used?
- When was the data last modified and by who?
- What models, drawings and documents are used on this project and who is working with them?
- What is the current status of a part, assembly, drawing or document?

And eliminates the need to ask:

- Where is the drawing and model for this part stored?
- Can I update this part or assembly?

## Concurrent Engineering

Users can share data between design teams and individuals simultaneously using Model Managers project management folder capabilities.

## Bill of Materials

PDM Integrator has a facility to leverage BOM structures directly from the 3D CAD data structure into Model Manager.

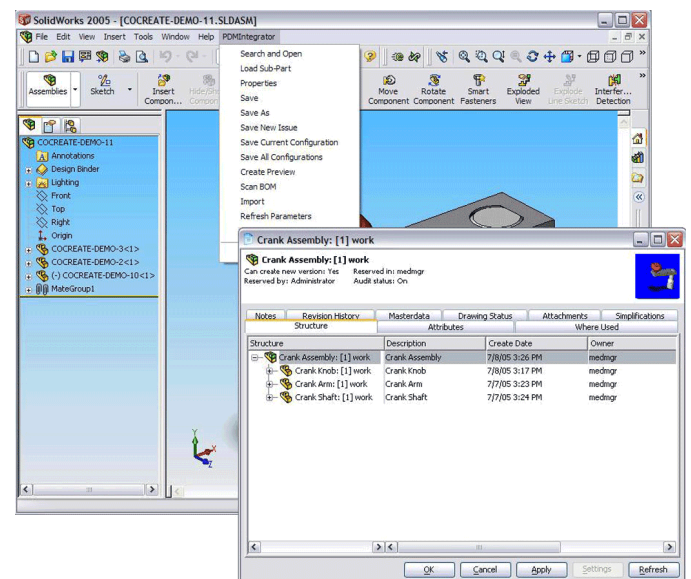

## Out of the Box

This solution is available out of the box without the usual extensive consulting overhead associated with other Design Management and PDM systems.

However, Model Manager is a highly configurable product, which can be tailored to meet specific customer business requirements such as

- auto-part and document numbering
- MRP integration
- Specialized report generation
- WEB based remote access
- Legacy data import

PDM Integrator for Model Manager provides a valuable and time saving fourth dimension to any engineering CAD installation.

## Office Document Management

Each PDM Integrator license includes a free of charge license of PDM Anydocs.

PDM Anydocs extends the support of Model Manager to include other MS Windows file types such as Word, Excel and PowerPoint. In fact this integration will support most Windows applications that create single physical types applying the same business rules and change control, as you would for your 2D and 3D Data.

## PTC's CoCreate Model Manager

PDM Integrator and PDM Anydocs are both add-on modules for Model Manager. For further information on Model Manager please refer to the PTC web site [www.PTC.com](http://www.PTC.com)
